

FLAVANTO 40 TABS

CLARIFIERS

General features

Flavanto 40 Tabs is a PVPP (polyvinylpolypyrrolidone) with a remarkable absorption index of 40 percent. This adjuvant is in the form of a white, very fine, hygroscopic powder. Its powerful adsorptive action targets simple polyphenols, which are known to be responsible for excessive browning of beer. The interaction between Flavanto 40 Tabs and beer is incredibly fast, which means that the required contact times are extremely short, especially when operating at temperatures below 10°C. Here are the key benefits of Flavanto 40 Tabs:

- Unstable color removal: Flavanto 40 Tabs is designed to effectively remove the unstable color present in beer, helping to ensure a clear and inviting looking beverage.
- Color enhancement: this adjuvant helps improve the overall color of the beer, making it brighter and more attractive to consumers.
- Olfactory cleanliness and aroma enhancement: Flavanto 40 Tabs also acts on olfactory cleanliness and aroma enhancement, ensuring that the beer's aroma remains fresh and inviting.
- Standardization of foam levels: this product helps standardize foam levels in beer, ensuring a consistent and appealing appearance.
- Flavor enhancement: Flavanto 40 Tabs can help enhance the taste of beer, ensuring that each sip is pleasant and satisfying to the palate.
- Less use of antioxidants: by using Flavanto 40 Tabs to improve beer stability, the need to use large amounts of antioxidants can be reduced.

Composition

Pure PVPP in tablet form

Dosage

80 g/hl (maximum legal dose).

How to use

Use Flavanto 40 Tabs in 1:5 aqueous suspension for 20 minutes. Leave for at least 24/36 hours, filter. Conduct preliminary tests on small beer samples.

Packaging and storage

1 kg bag.

Store in a cool, dry place.

Beer
